ADCO Expands Ohio Polyurethane Manufacturing to Meet Growing Customer Demand

Chagrin Falls, OH. - ADCO Products, Inc., has recently expanded manufacturing capabilities in Chagrin Falls, Ohio. The facility, which primarily supports ADCO Roofing Products' Millennium One Step™ and Hurricane Force® brands of two-component polyurethane adhesives and sealants, has nearly three times the manufacturing footprint of the former production plant. New state-of-the-art computer automated manufacturing equipment was added to expand production capabilities to accommodate increasing customer demand. "Roofing

professionals continue to demand greater options for fast, reliable, single-ply membrane and insulation attachment, driving the growth of two-component polyurethane adhesives", said Glenn Frommer, President of ADCO Products, Inc. "The drive for increasing thermal performance makes adhesives an attractive choice over mechanical fastening options."

In addition to the new manufacturing equipment, raw material storage capacity was increased to provide greater flexibility to handle our growing line of specialty products. "Investing in the Ohio manufacturing plant reflects our commitment to both providing customers with the highest quality products available, and expanding our line of innovative new options for VOC-free, cold applied roofing adhesives", Frommer said. "With the rapid growth of our newer product lines such as Lockin' Pocket™, Hurricane Force® Membrane Adhesive, and One Step™ Green Insulation Adhesive, we simply outgrew the old facility."

The company currently operates 2 additional manufacturing plants in the U.S. and has over 40 years of experience in developing and manufacturing polyurethane, butyl, acrylics, polysulfide, and MS polymer based adhesives, sealants and tapes. For more information call 800-248-4010 or visit www.adcocorp.com.
